## arwa-clinic – for the most stringent demands in hygiene and functionality

The arwa-clinic sanitary fitting range has been specially developed for precise needs in the fields of medicine and care. The clinic lever has a small surface contact area and can be operated with the elbow, arm or back of the hand. It is made of an easy-care, shatterproof synthetic material and is chemical-resistant.

### Application

- For hospitals, the medical and care sectors, the elderly and the disabled.

### Product range

- A comprehensive range of mechanical mixers with a variety of versions, such as a special front-operating wall mixer and combi-mixer for sinks and bedpan flushers.
- For maximum comfort, the range is fitted as standard with a multi-jet spray and a high-quality, hygienic synthetic hose.

### Operation

- By means of a convenient and ergonomic polycarbonate operating lever featuring a small surface contact area. Flexible, homogenous and shatterproof.

### Hygiene

- The mixers are fitted with the sealed-unit Trigon operating and mixing system, which offers convenience and hygiene with a clearly separated flow and temperature function. The system remains hermetically sealed at all positions of the operating lever. Laminar jet nozzles prevent aerosol formation and offer increased protection against legionella bacteria, while the chrome-plated surfaces make for easy cleaning.

## The modular system – arwa-class and arwa-clinic

The arwa-class range offers extremely user-friendly operation, perfectly tailored to the needs of this particular user group. As and when required, the arwa-class can easily be converted to the arwa-clinic and vice-versa (lever conversion kit 9.63685.100.001). This enables flexible adaptation to all needs, e.g. catering to different residents in care homes.

arwa-class  
9.38752.100.001 (with Ecototal cartridge 1.88008.000.000)  
or 9.38752.100.501 (with cartridge with limit stop 5.76001.000.000)

arwa-clinic  
Washbasin mixer 9.38752.100.094 (with cartridge with limit stop 5.76001.000.000)

### Flow and temperature control

- The arwa-clinic comes with a flow- and temperature-limiting cartridge (5.76001.000.000) as standard.
- The built-in scald protection ensures that the set temperature is not exceeded. The temperature range can be altered at any time.
- The cartridge also permits a reduction of the maximum flow for at-risk patients. The arwa-class may also be fitted with this cartridge as an option.

### Drain valve with rotary lever

- Available separately to facilitate optimum use of the drain valve for the disabled.

### Shut-off connection clinic

- Available as an option if a screw-down valve is required. These fittings are combined with versions without connection (code 097). Available in 1/2" (9.60467.100.001) and 3/4" (9.60468.100.001).
